Cannot Play online with DS Lite

This discussion is locked  DRAIKOV3  14 posts since Aug 5, 2011

Ok. I'm trying to connect to Wi-fi on My Ds-Lite for te first time and with Pokemon Platinum( IK they are both old) and It found my router fine. For the First Connect slot i put what the Nintendo Support Told me to put (Like with the IP Adress And Submask and Gateway Stuff) and on the Second I put what Belkin Support Guy told me to put, Like on my Router home page. For both, whenever i test connect it starts out no bars then Goes to 3 bars and Goes back down to 0 in an instant. It then gives me the Error Message 50000 or 50001. how do i fix this to connect to WiFi?

What security is on the router?

And, it's best just to put the settings to Auto, dont' manually enter the IP and stuff unless you really need to.

That's not what I meant.
Cannot Play online with DS Lite

Like, WEP? WPA? WPA2? No security?

Hold on

Security Mode | Disabled | WPA/WPA2- Personal
Authentication | PSK | 128bit WEP | 64bit WEP
Encryption Technique | WPA-PSK + WPA2-PSK | WPA-PSK | WPA2-PSK

Well that would be why.

The DS lite does not support WPA or WPA2. It ONLY supports WEP. So you will need to change your security, or turn it off altogether (not recommended, although WEP really isn't secure either).

I will try that. Thanks

128 or 64WEP
It really doesn't matter. The only thing that changes is the size of the password.

So would i need a password to connect on my DS im guessing not but i already have the WEP Key set on my DS Lite would i need to change it to the one i put here?

Yes, whatever you set your password to be, it must be the same on the DS Lite. You'll just have to edit the settings.

Ok thanks do i need that huge key thing or not

Yes, you do. The big key is exactly what you'll be typing in as the password. The point of the "Passphrase" is to generate that key.
The "Passphrase" can only be used with stuff like computers. The key is the only thing that works with the DS, so you'll need to copy that whole thing down (But once entered, it will stay there).

If you switch it to 64 and only mark 1 Row do i till have to put the entire thing in my ds and how would i with spaces or dashes or nothing in between

<table>
<thead>
<tr>
<th>Security Mode</th>
<th>Disabled WPA/WPA2-Personal(PSK) 128bit WEP 64bit WEP</th>
</tr>
</thead>
<tbody>
<tr>
<td>Key 1</td>
<td></td>
</tr>
<tr>
<td>Key 2</td>
<td></td>
</tr>
<tr>
<td>Key 3</td>
<td></td>
</tr>
<tr>
<td>Key 4</td>
<td></td>
</tr>
<tr>
<td>(hex digit pairs)</td>
<td></td>
</tr>
<tr>
<td>NOTE: To automatically generate hex pairs using a PassPhrase, input it here</td>
<td></td>
</tr>
<tr>
<td>PassPhrase</td>
<td></td>
</tr>
</tbody>
</table>

It won't let me put in that many digits with spaces

Your WEP Key should be 26 characters.

And it should have no spaces.
I got it working! thanks a lot!

Well now i get a different error code and my routers wireless indicator blinks orange

So, when you try connecting, what happens?

NVM wrks perfectly thanks a bunch

No problem. Have fun online.

<table>
<thead>
<tr>
<th>Header 8</th>
<th>Header 9</th>
<th>Header 10</th>
</tr>
</thead>
<tbody>
<tr>
<td>3e</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Just Try To Restart Your Wep And Enter Your Security Info Again But If It Does Not Work The Best Thing To Do Is Call Nintendo At : 1-800-255-3700

Please don't go around bumping old threads. This thread is over three years old. There's no reason to dig it up. The thread starter is also no longer a member here, and the Nintendo Wi-Fi Connection service for online play of Nintendo Wii and DS games ended this past May.

Due to the age of this thread, and it's recent resurfacing, I am going to be locking down the thread so that there can be no more comments on it.
