While it may or might not work, it might be "better to be safe than sorry", Nintendo does really recommend only using an Hard-Disc drive (HDD), as the use of any other memory storage device might be cause problems either with data being corrupted, and/or to even hardware issues/damage with the Wii U console or other devices.

And this url will give you some specific Hard-Drives recommendations that Nintendo has tested and found to be compatible with the Wii U console.
